

3) **FORMULATION OF A LIQUID COMPOSITION TO FORM AN ELECTRICAL INSULATOR, AN ANTIOXIDANT OR A DEGREASER**, as recited in claim 1, characterized in that the basic formula to form an electrical insulator comprises: 70 to 90% tetrachlorethylen, 5 to 20% Mineral oil (SAE15W/40API-CF4/CF CE/SS), 3 to 5% high viscosity methyl cellulose carboxy and 5 to 7% depropylen glycol (methylen chloride).

#### **ABSTRACT**

**FORMULATION OF A LIQUID COMPOSITION TO FORM AN ELECTRICAL INSULATOR, AN ANTIOXIDANT OR A DEGREASER**, obtained from the combination of by-products with mineral origin, whose formulation shall vary to meet different characteristics, becoming an electrical insulator, an antioxidant or a degreaser, ideal for different applications, the basic formula comprising: tetrachlorethylen, Mineral oil, methyl cellulose carboxy and 5 to 7% depropylen glycol (methylen chloride).
